New Marine Transmission Coupling Makes Canadian / US Debut

December 16, 2009 – Thermoboat of Sydney BC, Canada introduces the line of Powertrain Couplings to the US and Canadian markets. Manufactured by Powertrain Europe AS of Norway, the all new Powertrain coupling is used to connect marine transmissions to propeller shafts and can correct shaft to transmission misalignment by as much as 8 degrees without the need of a mounting bulkhead. Conventional rubber couplings, by comparison, only allow for .05 degrees of deflection. The Powertrain Coupling is available in three sizes, capable of handling up to loads of 700hp. Powertrain's unique design, utilizing CV technology found in the automotive industry can save thousands of dollars over similar products that require a load bearing bulkhead for installation.

"With this coupling and Poly Flex engine mounts, boat builders and owners will see a spectacular difference in the performance of their boats, especially in the reduction of noise and vibration" says Hugh Carroll, president of Thermoboat, who also imports Poly Flex engine mounts in North America. "The Powertrain Coupling costs less than competitive products and solves the problem of shaft alignment using proven engineering and the highest quality marine materials".

Installation of the coupling can be achieved in a little as 15 minutes and is virtually maintenance free once installed. The advanced design and ease of installation makes it ideal for use in re-powering engines, especially in sailboat applications where shaft alignments are most problematic.

The Powertrain Coupling will debut at the upcoming Toronto and Seattle Boat shows in January. Thermoboat will handle all aspects of North American sales and service of this product including distribution. Boat builders and yacht repair facilities can contact Thermoboat directly for pricing and specific applications. For more information and data sheets contact Thermoboat at info@thermoboat.com, by phone at 1-888-769-8495 or on the web at www.thermoboat.com

Thermoboat™

Powertrain Coupling

The super-flexible coupling for use between marine transmissions and propeller shafts. The technology is based on the standard front wheel drive joint found in most modern cars. A revolutionary idea! Very simple installation!
