

Ladybug Pram designed by Harry Bryan

I have used a Davidson dingy to get to my boat when it is moored of Salt Spring Island. The problem is the yarding it up the beach at low tide. I saw the Ladybug pram designed by Harry Bryan in a Wooden Boat magazine and at last year's Wooden Boat Festival in Port Townsend 2009.

As I am the distributor for MultiPanel a high density foam core material I wondered if I could make the wheelbarrow boat out of it.

I have attached some pictures and with the help of my friend Harry Torno and his brains we have built the hull.
